

Funds of Knowledge Inventory

My name: Sam & Tanner

Choose either [elementary students' persona](#) or [high school students' persona](#).

Use the following worksheet to record observations about your students and ideas about how you can use student's interests and experiences in the classroom.

Record your observations of a student's interests, activities, and skills that s/he is involved in outside of school. Once you note what a student is doing (e.g., selling vegetables at a flea market), you can then identify what type of funds of knowledge academic category best applies (e.g., "economics" or "mathematics" for the flea market context). Then brainstorm ways to integrate the skills involved in that context to your lesson design project or future classroom. (e.g., Math: how to maximize profit margins for selling corn by the pound vs. by the ear). Since this is a cumulative document, multiple examples can be added to any particular category.

Funds of Knowledge	Home/Community Practices	Classroom Application
Economics	Jacob's family is well off and so is community	It is likely that Jacob's community will share the ability to work with money and have similar ideas of currency
Geography		
Politics	Popular among fellow students,	Can lead classroom discussions, good social skills,
Agriculture		
Sports	Access to recreational sports teams and facilities, talented athlete	Jacob can use his skill and knowledge in sports to apply to math problems whether its points in a game or team members.
